ABOUT ME

Proactive student of Computer Engineering, with experience in full-stack and backend systems. Skilled in designing APIs, databases, real-time systems, and foundational ML/EDA techniques. Passionate about building efficient and scalable systems; excited to grow into more challenging software engineering roles focusing on system architecture and robust implementation.

EDUCATION

LOK JAGRUTI UNIVERSITY – INSTITUTE OF ENGINEERING & TECHNOLOGY

2023 – Present

B.E. in Computer Engineering (Expected 2027)

SKILL

PROGRAMMING: PYTHON, JAVA, JAVASCRIPT, SQL

FRAMEWORKS: DJANGO, FASTAPI, FLASK, REACT, NODE.JS, EXPRESS

DATABASES: MONGODB, POSTGRESQL, MYSQL, SQLITE

TOOLS: GIT/GITHUB, POSTMAN, DOCKER (BASIC)

ML/DS (BASICS): PANDAS, NUMPY, SCIKIT-LEARN, MATPLOTLIB

PROJECTS

Job Portal with AI Resume Matching [\[GITHUB REPO\]](#)

Built a MERN job portal that calls a Python/Django service to parse PDF resumes and score job-fit using the Groq LLM. Node backend integrates the Django REST API

- Implemented the Django API (DRF, pdfplumber, Groq) with structured outputs and .env-managed secrets.
- Exposed endpoints for job data extraction & AI matching; integrated with Express/Mongo workflows

CodeCompiler [\[GITHUB REPO\]](#)

Built a Django app that runs Python/C/C++/Java securely with a Monaco editor and problem management. Supports either a Dockerized FastAPI executor or Judge0 (RapidAPI) for sandboxed execution.

- Containerized a FastAPI code-runner for isolated execution; unit-tested executors and used env-based config
- Django backend with auth & submissions; SQLite in dev, optional MongoDB for analytics; Cloudinary for media.

News Website [\[LIVE DEMO\]](#)

Developed a full-stack MERN news platform designed for high user engagement and growth. Integrated secure authentication, real-time analytics, and personalized activity tracking to enhance user experience.

- Built interactive article management with likes, bookmarks, and history tracking.
- Implemented gamification through badges and reading streaks to drive retention and consistency.

Recipe Finder Platform [\[LIVE DEMO\]](#)

Developed a full-stack React + Node.js culinary platform with intelligent API management and multi-currency support. Implemented serverless architecture with automated failover systems to ensure scalable performance.

- Built responsive UI with custom design system and real-time currency conversion across 7 currencies.
- Integrated Spoonacular API with intelligent key rotation, error handling, and automated failover for uptime.

CERTIFICATES

- **Exploratory Data Analysis for Machine Learning** – Coursera(Offered by IBM)
Issued:June 2025 | [View Certificate](#)
- **Introduction to HTML, CSS, & JavaScript** – Coursera(Offered by IBM)
Issued:Dec 2024 | [View Certificate](#)
- **Inheritance and Data Structures in Java** – Coursera(Offered by University Of Pennsylvania)
Issued:May 2024 | [View Certificate](#)
- **Introduction to Java** – Coursera(Offered by LearnQuest)
Issued:Jan 2024 | [View Certificate](#)
